Education

Georgia Institute of Technology *Aug 2026 – May 2028*
Master of Science in Computer Science

University of Houston – Houston, TX *Aug 2020 – May 2025*
Bachelor of Science in Computer Science, GPA: 3.56 Cum Laude

Experience

Piping Technology & Products, Inc. Houston, TX

Software Developer I *Sep 2026 – Present*

AI Intern *Jul 2026 – Sep 2026*

- Built and deployed features for an internal request-for-quote tracker, including Gmail-thread viewing, assignment and review workflows, bulk updates, and configurable user routing
- Unified customer inquiries and quote requests into one review and creation workflow, replacing separate interfaces and redundant status actions based on user feedback
- Built Gmail-triggered automations that route customer inquiries and quote requests to an internal dashboard as emails arrive, with **0 recorded delivery failures** across **80+ production runs**
- Designed and deployed a **PostgreSQL** intake backend on **AWS EC2** and **RDS** with **seven API endpoints**, replacing a cron-and-shared-file workflow and migrating **2,500+ records**
- Built a production **AI-agent** pipeline that classifies incoming customer emails, extracts structured request data, and routes each request through the appropriate internal workflow
- Rebuilt an AI agent's integration with a legacy data-export system after tracing failures to an **NTLM** library that dropped POST bodies, restoring scheduled pulls and reducing batch runtime by **21% (263s to 208s)**

Freelance Web Developer Aug 2025 – April 2026

Rose Tea House | *roseteahouse.com* | *github.com/Rikkayyy/RoseTeaHouse-Portfolio* *Pearland, TX*

- Built a full-stack website with **React**, **Next.js**, and **Tailwind CSS**, translating client requirements into a responsive, production-ready application serving as the business's primary online presence
- Configured **AWS Amplify** with **CI/CD** pipelines, **IAM** roles, and environment-based configuration, enabling automated deployments from GitHub with zero manual intervention
- Integrated **AWS SES** for email delivery for contact forms and **AWS S3** for persistent content storage

Projects

CardSync | *Java, Spring Boot, React, TypeScript, PostgreSQL, Plaid API* Aug 2026 – Present

- Built a full-stack personal finance app in **Spring Boot**, **React**, and **PostgreSQL** that combines **242+** real bank and card transactions from 3 banks with **Plaid API** cursor-based sync (card-sync-steel.vercel.app | github.com/Rikkayyy/CardSync)
- Designed transfer detection that pairs equal, opposite-sign transactions within **3 days** across banks, so money moved between accounts no longer counts as spending
- Secured login with **Spring Security**, **JWT**, and **BCrypt**, and encrypted stored bank tokens with **AES-256-GCM**

Open Source – HireGauge | *Python, pytest, pymupdf4llm* Jul 2026

- Found and fixed two silent bugs in an AI resume parser (corrupted URLs from PDF text extraction, and missed non-hyperlinked personal websites), with **4 unit tests**, merged after maintainer code review (https://github.com/AdvancedUno/HireGauge/pull/52)

Houston Paint Protection Web App | *JavaScript, React, MongoDB, Node.js/Express* Jan 2025 – Jul 2025

- Built **8 REST API endpoints** for a job-tracking app on an **8-person Agile team**, covering **JWT** login, email verification, and admin user management
- Secured accounts with **bcrypt** password hashing and **role-based access control** for 3 roles, and let admins deactivate users while keeping their job history
- Maintained the **CI build script** (`build.sh`) invoked by the team's **Jenkins pipeline**—environment setup, dependency install, and **test-gated builds** across frontend and backend—and added automated **code coverage reporting** to the pipeline

Certifications

AWS Certified Cloud Practitioner Nov 2025

Amazon Web Services · Expires: Nov 2028

Credential ID: 9b6e5805d3574a93aa2fd04113be1758

Technical Skills

Languages: C++, C#, HTML/CSS, Java, JavaScript/TypeScript, Python, R, SQL
Frameworks & Libraries: ASP.Net Core, Express, Maven, Next.js, Node.js, React, Spring Boot, Tailwind CSS
Databases & Storage: MySQL, PostgreSQL, MongoDB, Supabase, AWS S3
Tools & Platforms: AWS, Docker, GitHub, Jupyter, PyCharm, VS Code
